

Plant 9, Special Products Plant

Interesting Fact:

Plant 9 was designed to manufacture thorium metals. When operations ceased in 1957 the equipment was modified to produce enriched uranium metal.

Mission:

Used to machine uranium ingots for extrusion and cast derbies and high-grade recycled enriched uranium metals into large-diameter ingots.

Demolition Insight:

Plant 9 was the first plant to be demolished with the aid of a track-mounted shear. The shear became the standard for future building demolitions at Fernald.

Demolition Completion:

Nov. 1998
